

AGENT

Agent is a basic data collection and visualization software that makes the tasks of configuring hardware, monitoring sensors, collecting data, managing data files, and applying corrections easier and faster.

Agent vs Third-Party Data Acquisition Software

3RD-PARTY SOFTWARE

Industry-leading data visualization software platforms have dozens of visualization and analysis tools to help the user understand complex data and make informed decisions.

DATA ACQUISITION		
X	Automatic Data Collection	X
	Edit / Recalibrate Logged Data	X
	Add Manually Taken Readings	X
	Remove Data Noise by eliminating random disturbance in sensor readings	X
X	Export Data Files	X
X	Populate Calibration Factors Automatically from GEOKON calibration database (Not available for all sensors)	
X	Converts Raw Data to Engineering Units	X
X	Perform Powerful Math Calculations	X
VISUALIZATION AND ANALYSIS		
X	Display Numerical Data in Versatile Tables	X
X	Customizable Trendline Graphs	X
	Custom Dashboards	X
	Overlay real-time data on an image, webcam, or GIS map	X
	Contour Plotting displays measurement distribution over a given location	X
	Over 30 Visualizations and Analysis Tools	X
REPORTS, ALERTS, AND COLLABORATION		
	Create, Design, and Schedule Reports for daily, weekly, or monthly delivery	X
X	Visual and Audio Alarms for out of range data and sensor malfunction	X
	Manage Stakeholder Access to Features and Data with fine-grained user roles	X
	Customizable Interface and Login Page can display user's brand logo and colors	X
